

Projects Implemented in Jdeidet El Shouf

Within the support and funding of the MINARET, a study was conducted on the methods and techniques to transport water from Jdeideh the village to Bakaata.

Two plans were set

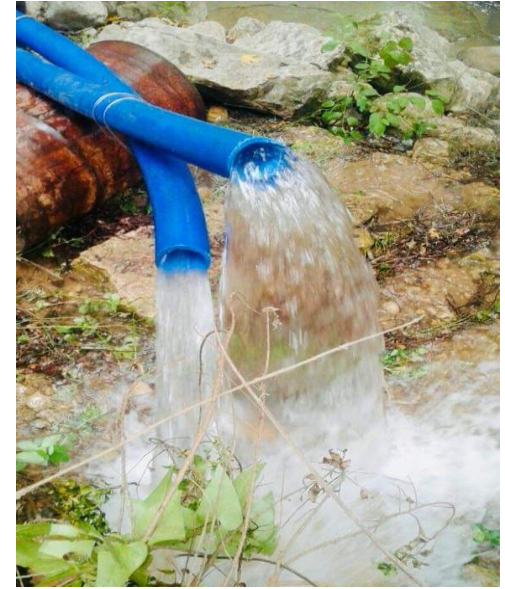

Nabe'et Kareem

- Nabe'et Kareem is a natural spring in Jdeideh near Mukhtara village. The project was in partnership with EBML and in collaboration with Mr. Walid Joumblatt who bought the land and suggested the establishment of a water pumping system so that water could be pumped from the spring to Moukhtara bridge. A cement tank was built along with a water pumping station with pipes of 8 inches width.

Some photos of the work implementation

Trainings with Green Orient

- In 2018 and in cooperation with Green Orient, several trainings and awareness sessions were conducted focusing mainly on farmers and local producers. The trainings were mainly about beekeeping and oregano plantation. 1000 oregano seedlings were distributed on four key farmers.

Souk El Ghalli

- Souk El Ghalli was launched in August 2018 in cooperation with ACS, SIF and the Bakaata Women Organization. Local producers got to market all of their products. This market will again be implemented in 2019 and the coming years.

Other Trainings with SIF

- SIF conducted trainings for women on the methods of drying fruits and making Labneh Serdaleh (shown in the photos below) and other food products prior to the implementation of the market.
- SIF also led several trainings on poultry and beekeeping, and distributed chicken to 14 farmers, each farmer got 24 chicken.

Beekeeping and Poultry Distribution

Solar Panels

MINARET considered the main energy needs of the village. A project is being worked on by the mayor of the village and UNDP to provide the village with energy saving measures and solar panels.

Installing Solar Panels

These panels were able to: generate electricity, heat water, reduce costs for energy and at the same time improve the environmental impact of Jdeidet El Shouf municipality.

Overall picture of what MINARET achieved as a momentum and vision

- MINARET was able to create a momentum in Jdeidet El Shouf and to gain the credibility of the residents since they have now seen concrete results regarding energy, water, agriculture, value chain, etc...
- MINARET was also able to generate a network between all stakeholders and involve them in all the levels of the project.
- Task forces in each municipality were also established who are responsible of exchanging visits to work on abiding by NEXUS approach and upon sustainable development goals.
